Supervised Learning:

Pneumonia Image Classification

Dataset Distribution

- Train Set (60%)
- Val Set (30%)
- Test Set (10%)

Hyperparameters

- Epoch - 10
- Learning Rate - 0.001
- Batch size - 16
- Number of activation layers - 3 (with SoftMax output layer)

Model Performance Summary

ResNet18 achieved the highest performance with a test loss of 0.2655 and an accuracy of 0.8942, outperforming both DenseNet121 (test loss 0.3537, accuracy 0.8718) and ViT_B_16 (test loss 0.6398, accuracy 0.8221). Overall, while all three models showed strong results on the chest X-ray dataset, ResNet18 exhibited the most favorable balance of low loss and high accuracy making it the model of choice for this dataset.
